

## ECOSALT ICE MELTER

EcoMelt™ Technology is the backbone of many Government and Municipal de-icing programs in North America. It is based on the introduction of dissolved proteins and sugars to granular chlorides to lower the eutectic and corrosion rates, while increasing melt capacity. These bio-based additives are always produced from renewable resources and follow rigorous testing to comply with industry standards. EcoMelt Technology products are perfect for the discerning professional that needs a truly “Environmentally Friendlier” product for salt management programs.

EcoSalt's patented organic chemistry allows for fast ice melting action, while the sized particles make it ideal for commercial spreaders and other equipment. The bio-based coating is derived from renewable agricultural resources.

Number	Size	Pack	Pallet Qty	Pallet Wt.
TB-ECO-SALT227KG	22.7kg Bag	1	49/Pallet	1150kg

**71%**

Less corrosive than commercial road salt.

**SHRP 205.1**

Ice melt capacity tested by third party labs to exceed all claims.

**-30°**

Our products melt ice below -30° Celsius.
